Anneal-temperature regime across six compiled dopant-implantation systems (bar = reported range, not activation level)
SiC (n=27 rows, 10 sources, fitted model)
GaN (n=15 rows, 10 sources, qualitative/contrast only)
Diamond (n=9 rows, 8 sources, qualitative/contrast only)
InP (n=4 rows, 3 sources, qualitative/contrast only)
GaAs (n=6 rows, 5 sources, qualitative/contrast only)
Si (n=6 rows, 4 sources, qualitative/contrast only)
